LEYENDA

Iconos de actividades

 Rango de edad	 N° de Usuarios	 Altura Libre de Caída
 Tobogán	 Escalada	 Escalada
 Juego	 Trepar/Cuerdas	 Barra de Bomberos
 Túnel	 Puente	 Inclusivo
 Columpiarse	 Balancín de Muelle	 Balancín Doble
 Carrusel	 Banco	 Refugio
 Equilibrio	 Colgarse	 Deslizarse
 Trampolín	 Sonido	 Luz RGB
 Arnés	 Casco de Seguridad	 Columpio de Canasta

Iconos de Materiales

 Estructura de Madera	 Acero Inoxidable	 Paneles de HPL
 Estructura de Aluminio adonizado o Aluminio imitación madera	 Acero Carbono	 Paneles de HDPE
	 Polietileno	 Paneles en Acrílico

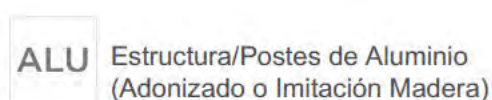

Iconos de Opción de Materiales de Estructura:

Estos dos iconos aparecen en aquellos productos que tienen la opción de elegir el material para su estructura (postes)

Estructura/Postes de Madera

Estructura/Postes de Aluminio
(Adonizado o Imitación Madera)

MATERIALES DE CONSTRUCCIÓN

Postes de Madera / HRC

Madera: Postes de sección cuadrada con aristas redondeadas de madera de pino laminada encolada en "finger joint" con tratamiento en autoclave y acabado lasure clase IV a base de agua.

HRC: (Husk Rice Composite) Mezcla de cascara de arroz (fibras naturales) con polímeros (plásticos reciclados) para obtener un compuesto reciclado y reciclable con excelentes propiedades estructurales mas duraderos y resistentes que la madera tradicional.

Postes de Aluminio

ALU

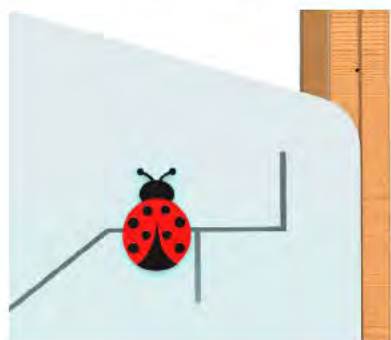

Aluminio Imitación Madera

Los postes de aluminio que utilizamos son sometidos a un tratamiento de adonizado, que proporciona protección anticorrosiva, longevidad y, en consecuencia, reduce los costes de mantenimiento.

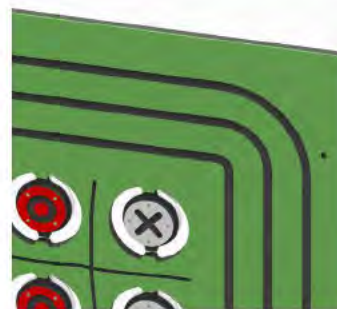

* Bajo pedido también disponemos de postes lacados en imitación madera

Paneles en HPL

HPL, laminado de alta presión, disponible en varios colores, anti-UV, resistente al vandalismo y fácil de limpiar

Paneles en HDPE

HDPE, polietileno de alta densidad - resistente a productos químicos, corrosión e impactos, anti-UV.

Tubos de protección

Tubos de protección en acero inoxidable y aluminio anodizado.

Acero carbono

Los elementos de acero al carbono se someten a un tratamiento de decapado y metalización. Este proceso es crucial para proteger el acero de la oxidación, la corrosión y prepararlo para la pintura electrostática.

COMPONENTES

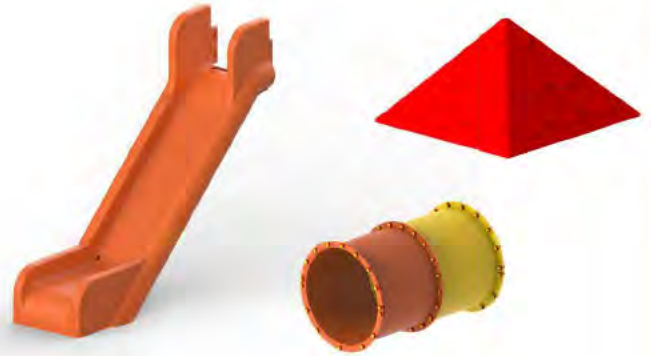

Redes

Redes marineras, escaleras y cuerdas de escalada en polipropileno de Ø16mm reforzado con cables de acero en su interior. Fijaciones de nailon anti-UV en pasos de cuerda, escalones y soportes.

Toboganes, Túneles y Techos

En polietileno rotomoldeado, con gran resistencia a químicos, impactos y anti-UV.

Ballestas

Muelle helicoidal de acero Ø200 mm con pretratamiento de fosfato de zinc, pintura en polvo electrostática, poliéster termoestable con componente anti-UV.

Tornillos y Tapones

Tornillos de acero inoxidable. Tapas, cápsulas y tapones en poliamida PA6 natural.

Cadenas y Asientos

Cadenas de acero inoxidable
